

CONVENTIONAL BARN

The Conventional Barn remains a trusted workhorse in tobacco curing, valued for its durability, simplicity, and proven performance. It is designed with a time-tested natural airflow system that ensures consistent curing results across batches. Powered primarily by fuelwood, with optional integration of coal and auxiliary fans, it provides operational flexibility while maintaining reliable heat generation and distribution.

To achieve optimal performance, the barn must be correctly sized and matched with an appropriately rated furnace, ducting system, chimney height, and ventilation openings. Proper system integration ensures balanced airflow, stable temperatures, and efficient moisture removal. When well-calibrated, the Conventional Barn delivers consistent, high-quality cured leaf while maintaining its reputation for dependable, low-risk tobacco production.

EFFICIENCY: 9KG COAL /1KG OF TOBACCO

CAPACITY: 2 HA
